

# Ranvet's

# Sea-5 paste

## Organic Feed Supplement for horses

Ingredient: Organic Fucoïdan 20g/60mL

Ranvet's Sea-5 paste is a stabilising feed supplement for the performance horse and horses in training to aid in decreased appetite & stress related stomach disorders

### What is Sea-5 Paste?

Ranvet's Sea-5 Paste is a formulation containing 5g of high purity organic fucoïdan.

### What is Fucoïdan?

Fucoïdians are complex sugar polymers that occur naturally in brown seaweeds where they function to protect the plant from water-borne pathogens and other environmental challenges.

Until recently, extraction methods have utilised solvents in the precipitation process causing degradation of the polysaccharide and often resulting in contaminants in the final extract. Fucoïdians manufactured in this traditional way suffer from many shortfalls: their quality is inconsistent; their chemical integrity is altered and – most significantly – their bioactivity is diminished.

Australian scientists, working together with Ranvet, have developed a solvent-free method which produces fucoïdan extracts that remain unadulterated in chemical structure and free from solvent residues.

No other technology can produce certified organic fucoïdan.

### Why should I use Sea-5 Paste?

Studies undertaken by research groups around the world have demonstrated the efficacy of fucoïdan in a diverse range of indications and clinical settings. These indications include gastrointestinal health, immune support and enzyme inhibition.

In a study conducted by Ranvet at a leading Sydney thoroughbred racing stable, horses performing full work and racing were fed 5g per day of fucoïdan as Sea-5 Paste. These horses, which had shown loss of appetite and the inability to maintain condition during their previous preparation, all demonstrated a reversal of these trends:

-  Improved appetite, particularly in horses known to have a decreased appetite once under full work;
-  Maintenance of condition throughout the preparation;
-  Improved body condition and appearance, particularly noticeable in the coat.

The results of this trial show that Ranvet's Sea-5 Paste may help in combating the stressful environment associated with thoroughbred horses in full work, and may enable your horses to perform to their true potential.

### Presentation of Ranvet's Sea-5 Paste

Ranvet's Sea-5 Paste comes in a 60ml graduated syringe.

The daily dose is 15mL Sea-5 Paste per horse (*each 15mL contains 5g organic fucoïdan*) delivered over the tongue.
